MI WINDOWS AND DOORS' BRIDGEWOOD™ LINE EMERGES WITH MAXIMUM ENERGY EFFICIENCY

GRATZ, Pa. (March 25, 2008) - MI Windows and Doors™ BridgeWood™ line unique for its combination of structural strength, classic appearance and energy efficiency now provides an unprecedented glass package and unique hardware features.

Combining the advanced engineering technology of the Green & Clean™ glass package with MI's state-of-the-art manufacturing process increases the window's energy saving performance. The Green & Clean glass package offers multi-level value to the window by joining the thermal excellence of Low-E 3 glass which can reach a U-Value of up to .30, *Neat® glass system which draws upon the sun's UV rays to loosen dirt making the glass easy to clean, and *Preserve® protective film which adheres to the glass until the end of the construction process when you peel away the film revealing the clean glass, free of the dirt caused during construction.

The technology behind the BridgeWood line allows homeowners to enjoy the attractive look of wood windows without the weathering issues like rotting and warping. Windows arrive standard from the factory in one of five colors; white, adobe, almond, evergreen or chocolate saving both time and maintenance. Available in casement, awning, double-hung, picture and specialty styles, our BridgeWood windows feature better properties, screw retention and water absorption resistance than other widely used materials.

MI Windows and Doors manufactures windows with the pledge of "Seeing You Through," focusing on high-performing technology, superior energy efficiency and top-quality customer service.

MI provides replacement, architectural and new construction windows. MI manufactures windows that are Energy Star™ qualified and supported by a limited lifetime warranty, combining energy efficiency with practical, worry-free performance.
